

PATENT

REMARKS

Consideration of the present application as amended is requested.

Claims 21-39 were added to the above-identified original application during prosecution, in which the examiner indicated that these claims were regarded as directed to a patentably distinct invention. Thus, the present preliminary amendment represents a divisional application submitted for action on the merits.

It is believed that claims 21-24 are patentable over the prior art. Entry of this amendment prior to consideration of the application on the merits is requested. Respectfully submitted,

By 
Kevin R. Erdman, Reg. No. 33,687
